SUMMARY

Extensive IT experience working on a diverse group of projects. Proven ability to leverage knowledge of Front-End technologies turning design mockups into functional applications.

Front-End Technologies: HTML, CSS, JavaScript, Bootstrap, AngularJS, React, Redux

WORK EXPERIENCE

Echo360, Alpharetta, GA
UI Developer (May 2019 - Present)
- Maintain and build a reusable component library that is used across internal web apps to enforce a consistent brand and provide a flexible and composable library for other developers to utilize.
- Experience building component-based web apps with React 16+ using hooks and styled-components.
- Strong knowledge and experience with modern JavaScript (ES6+), HTML, and CSS.
- Experience with asynchronous programming and working with RESTful APIs.
- Experience writing unit tests with Jest and Enzyme.
- Contribute to code reviews and participate in the development of best practices within the dev team.
- Experience working closely and effectively communicating with Product Managers and Designers.

Fiserv, Alpharetta, GA
UI Developer (October 2018 - May 2019)
- Building a reusable UI component catalog in React that is styled using CSS Modules.
- Work with Redux on container components that handle the stateful responsibilities of an app, such as initiating API calls, performing any necessary data formatting and giving developers a place to assemble routes, layouts and pages using the presentational components in the UI catalog.

General Motors, Roswell, GA
Software Developer (September 2014 – September 2018)
- Extensive Front-End development using HTML, CSS, JSON, JavaScript, and RESTful web services.
- Experience with UI frameworks such as AngularJS and Bootstrap.
- Work with development team in implementing the UI for Service Workbench, a dealer facing application used by Service Consultants to improve their workflow.
- Collaborate with UX designers when having to provide revisions to UI components of application.
- Consult with Business Analysts about new additions and/or revisions that need to be made to implement technical solutions that meet business requirements.
- Develop PL/SQL scripts and stored procedures to create main rules engine for equity mining software.
- Assist in schema design for equity mining application.
- Create and execute custom SQL database queries within the Oracle SQL Developer environment to update and maintain integrity of data model structure.
- Test application usability across multiple devices in order to create a consistent end user experience.
- Mentor junior developers to help familiarize them with the current technology stack and best development practices.

EDUCATION

Florida State University; Tallahassee, FL
Bachelor of Arts in Computer Science received August 2014 (GPA: 3.29)
